# CHECK LIST

OF THE DESCRIBED

# Hemiptera, Heteroptera of North America.

By P. R. UHLER.

The present list comprehends, as far as our present knowledge extends, a full list of the described species of North American Heteroptera. The collections of these insects are not as extensive in the United States as they are in Europe, and consequently it is difficult to obtain an adequate knowledge of the distribution of many species, upon which a correction of the synonymy greatly depends. Therefore, the introduction here of many so-called species rests solely upon the authority of the person who described them. Several of Mr. Say's species still remain unknown, and many of those of Mr. Walker are not recognizable by the aid of his descriptions. Such species have generally been placed provisionally in genera to which they appear to belong.

In the speedy completion of this list I am deeply indebted to the ready pen of Miss Pearl Daniels.
